SUPERIOR IMAGE QUALITY

HIGHER CONTRAST

Contrast 2000 : 1

Contrast 600 : 1

The simpler optical system reduces the unwanted effect of 'stray' light, allowing better contrast ratios which means sharper, more detailed images.

SHARPER IMAGES

Single Panel, no misalignment

3 Panels that will misalign over time

The unique single panel design of DLP™ technology means that the onscreen image is always precisely converged, without the misalignment that can occur with three panel systems.

BETTER MOTION REPRODUCTION

Faster Switching

Slower Switching

DLP™ technology has incredibly fast pixel switching speeds (thousands of times per second) which allows more accurate reproduction of fast-moving action without blur, smear or ghosting.

DLP™ VS psi LCD

	DLP™	psi LCD
