STAYING IN HAS NEW

Now, the best way to enjoy a great night out is to stay in with the new Sharp Digital Home Cinema Projectors.

Watch a movie, play your favourite console games, enjoy all the sports and entertainment TV channels on a breathtaking scale – with a new and sensational quality that has to be seen to be believed.

The secret behind this superb picture quality that makes these projectors so special comes from the Digital Light Processor technology. The same technology, in fact, that is now being used for showing the latest Hollywood blockbusters in cinemas.

This gives images that are ultra bright, with the crystal clarity of brilliant high contrast to capture every last little detail in fresh and natural colour.

Everything, about the new Sharp Digital Home Cinema Projectors is dedicated to taking you to sensational new heights in home cinema entertainment.

XV-Z10000

WATCH THE MOVIE...

The big movie demands to be seen on the big screen, and that's exactly what these exciting new Digital Home cinema projectors bring you. They project in a choice of widescreen or conventional formats with a screen size that measures up to a massive 200". Letting you experience the breathtaking picture quality that you'd see in a cinema. Quality that can only come from the most advanced Digital Light Processor technology.

Latest DLP technology combined with Sharp lens system and video processors provide superb video reproduction.

...PLAY THE GAME

Console and PC games really come into their own when played with the new Sharp Digital Home Cinema projectors. Quickly and easily connected, they bring you images of a size and quality that make gaming a totally different and more exhilarating experience – putting you right at the heart of all the thrilling action. The big question is, can you cope with excitement on this scale?

Optical lens shift systems allows the user to move 100% of screen minimising the need to use keystone correction.

Intuitive and easy to use menu systems that provide excellent control.

...TURN ON TO TV

You'll never look at TV in the same way again. Not once you've seen how these projectors transform any big sporting event, or other TV programme, come to that. The image size alone makes a vast difference, while the sensational picture quality brings it all to vivid life.

HD2 Mustang chip from Texas Instruments. 1200 x 720 chip.

...IT'S A SENSATION

For total impact the new Sharp Digital Home Cinema projectors can easily be integrated with all home entertainment systems, for a true cinematic experience.

True 720p - Progressive signal (XV-Z10000 only).

EVER BEEN MORE FUN
